1. WAP to get a string from user. Count and display total number of double letter sequences in the string.

2. WAP to get a string and abbreviate it. E.g. National Aeronautical Space Agency = NASA

3. WAP to reverse the case of all the letters of a string [without using toUppercase() and toLowercase()]

   You can use ASCII codes for conversion of case: +32 for capital to small and -32 for small to capital
